SKILLS

Languages & Scripting: Java, Python, JavaScript, TypeScript, Go

Frontend: React, Next.js

Backend: Node.js, Express, FastAPI

DevOps & CI/CD: Docker, GitLab CI/CD, GitHub Actions

Cloud & Infrastructure: AWS

AI & LLMs: RAG, LLMs

Streaming & Messaging: Kafka

Databases: PostgreSQL, MongoDB

EDUCATION

KLS Gogte Institute of Technology

B.E. in Computer Science and Engineering (CGPA: 8.3)

Belagavi, Karnataka

2026 Passout

PROJECTS

WeeklyAI - Multi-Agent AI Weekly Planner | [Live](#) | [GitHub](#)

- Built this because most planner apps just store tasks, they don't actually think about your week, so I made an AI system with **LangGraph** using 5 agents talking to each other through a typed StateGraph to turn one plain-English prompt into a full weekly schedule.
- Added **WebSocket** streaming so users see the plan being built live, and used **pgvector** with OpenAI embeddings so the AI remembers past habits, cutting manual re-entry of recurring tasks by **40%**.
- **Key Tech:** Next.js, FastAPI, LangGraph, LangChain, Groq LLaMA-3, PostgreSQL, Supabase, Redis, Docker.

QueryGraph - LLM-Powered Data Intelligence | [Live](#) | [GitHub](#)

- Built this after seeing how SAP Order-to-Cash data sits scattered across tables with no easy way to ask questions about it, so I built a **knowledge graph** with a plain-English query box powered by **Groq LLaMA-3.3 70B** that turns questions into SQL.
- Used a **dual-database setup** (PostgreSQL for analytics, Neo4j for graph links) with SSE streaming and broken-flow detection, cutting the time to spot a stuck order in the O2C process by about **50%**.
- **Key Tech:** Next.js, FastAPI, Cytoscape.js, Groq, PostgreSQL (Neon), Neo4j AuraDB, Docker.

INTERNSHIP EXPERIENCE

SuperMentr

Full Stack Developer Intern

- Built reusable components in **MERN**, **TypeScript**, and **Next.js** to replace slow, repeated front-end code, which cut new feature build time by **25%**.
- Fixed slow page loads by optimizing rendering and hooking up secure REST APIs, then shipped the app on **AWS** with CI/CD so releases that used to take a full day now go out in under an hour.
- Worked in agile sprints, fixed bugs reported by the team, and made the app work smoothly on both mobile and desktop screens.

Prodigy Infotech

Full Stack Web Development Intern

- Found that 3+ client apps were loading slow and losing users, so I rebuilt them with responsive React components and lazy loading, cutting page load time by **30%**.
- Set up CI/CD pipelines so manual deployment steps were removed, and worked with design and product teams to ship features that matched what clients actually asked for.

Eyesec Cyber Security Solutions Pvt. Ltd.

Cloud Security Intern

- Reviewed AWS and GCP accounts that had loose access rules, then designed tighter IAM roles and RBAC policies, cutting open security gaps by **35%**.
- Added AES-256 and TLS encryption to backend systems that were sending data without protection, closing a real risk of data leaks.

AWARDS AND ACHIEVEMENTS

Won **1st Prize** at a National Level IoT Hackathon by independently building a Full Stack RFID-based attendance system with multi-role apps for professors, parents, and students.

Active **Open Source Contributor** on GitHub, contributing code and fixes to public repositories.
